The following is an examiner's statement of reasons for allowance; the prior art does not teach:

A semiconductor device in which a plurality of semiconductor elements are formed on a substrate, wherein in some or all of said semiconductor elements, a channel width of a channel region formed in a semiconductor layer to which laser annealing is applied is larger than a channel length thereof, and a channel width direction is neither vertical to nor parallel with regard to a said direction of said substrate; and in at least the semiconductor elements, among said plurality of semiconductor elements, that are connected to a signal line to which data to be supplied to a drain of a corresponding one of said plurality of semiconductor elements is input and which is common to said plurality of semiconductor elements and that output data from the signal line, a channel width of a channel region is larger than a channel length thereof, and the channel width direction is neither parallel with nor orthogonal to a primary direction of extension of the signal line.
